DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 11 000391 Etsuro in view of Watkins U.S. patent no. 5,591,409.

Art Unit: 1744

Etsuro teaches a method and apparatus for preventing paralysis of the sense of smell wherein fragrances are supplied continuously with intermittent bursts of higher intensity. Etsuro is silent as to a second fragrance source.

Watkins teaches the presentation of fragrances in controlled applications with several different fragrance sources within the same apparatus and controlled, timed actuation and application thereof.

It would have been obvious to one of ordinary skill in the art to utilize plural fragrance sources in Etsuro for a secondary source with intermittent delivery because it would further minimize the occurrence of habituation of the sense of smell.

With respect to claims 2 and 3, Watkins clearly teaches timed, controlled electronic activation with user discretion for interval settings, and Etsuro also teaches timed interval activation, thus it would have been well within the purview of one of ordinary skill in the art to determine optimal interval segments.

With respect to claims 4-9, Etsuro clearly teaches liquid supply within a container having a wick therewith and a heating means at the wick level.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 10 is rejected under 35 U.S.C. 102(b) as being anticipated by Watkins.

Art Unit: 1744

Watkins clearly teaches two fragrance composition and means capable of supply of one continuously and another intermittently.
